Essential Question: What does the graph of an arithmetic sequence look like?
Do Now:
a) Use the figure pictured below to complete the table.

| $n$ | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ (number of dots) |  |  |  |  |  |

b) Plot the points from the table onto the graph.

c) Does it make sense to connect the points? Be ready to justify your response.

## Graphing Sequences

- the term's position number, $n$, in the sequence is graphed as the $x$-value
- the term $a_{n}$ is graphed as the corresponding $y$-value
- plot the ordered pairs ( $n, a_{n}$ )
- graph as a scatter plot (do not connect the dots).

Consider the arithmetic sequence 2, 6, 10, ...
a. Create a table of values for the sequence.
b. Write an explicit formula that represents the sequence.
c. Graph the sequence.
d. What is the slope of the line?

| $n$ | $a_{n}$ |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |

Explicit Formula

## Graphing Arithmetic Sequences

(1) Online bidding for a purse increases by $\$ 5$ for each bid after the first person bids $\$ 60$.
(a) Write a function rule that represents the arithmetic sequence.
(b) Graph the function.

(c) If the winning bid was $\$ 105$, how many bids were there?
(2) The amount of money a movie earns each week after its release can be approximated by the sequence shown in the graph.
(a) Write a function rule that represents the arithmetic sequence.
(b) In what week does the movie earn $\$ 16$ million dollars?

The points of the graph of an arithmetic sequence form a $\qquad$ .

The $\qquad$ of the line is the common difference.
(1) Write a sequence that represents the number of smiley faces in each group. Is the sequence arithmetic? Explain.
(2) Use the figure to complete the table and plot the points.
$n=1$
$\star$
$n=2$

| Number of stars, $\boldsymbol{n}$ | 1 | 2 | 3 | 4 | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Number of sides, $\boldsymbol{y}$ |  |  |  |  |  |

Write an equation that models the pattern displayed by the figure.
(3) A carnival charges $\$ 2$ for each game after you pay a $\$ 5$ entry fee.
(a) Write a function rule that represents the situation.
(b) Graph the function.

(c) How many games can you play when you take $\$ 29$ to the carnival?
