## 8 Algebra CC Zoom \#4 - Unit 15

## GRAPHING QUADRATIC FUNCTIONS

## Reminders:

$>$ Find the $\boldsymbol{x}$-coordinate of the vertex (turning point) using the formula, $x=\frac{-b}{2 a}$
$>$ Create a table of values using three $\boldsymbol{x}$-values smaller than the vertex, and three $\boldsymbol{x}$-values larger than the vertex.

1. $y=-x^{2}+2 x+5$

| $\mathbf{x}$ | $\mathbf{y}$ |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

2. $y=1 / 2 x^{2}-3$

| $\mathbf{x}$ | $\mathbf{y}$ |
| :---: | :---: |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

3. $y=x^{2}+5 x+4$

| $\mathbf{x}$ | $\mathbf{y}$ |
| :--- | :--- |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

## THE ROOTS OF A QUADRATIC FUNCTION

The "roots" of a parabola are the $\boldsymbol{x}$-coordinates of the points where the curve intercepts the $x$-axis. These values are also known as the "zeros" of the function.
A. Identify the x-intercepts of the function in example \# 3 .
x-intercepts: ( $\qquad$ , $\qquad$ ) $\qquad$
$\qquad$ )
B. Identify the roots of the function in example \#3.
C. How can we determine the roots algebraically?
D. Identify the roots (zeros) of the function.

Two solutions;
Two roots

One solution;
One root

No solutions; No roots
